

IN THE CLAIMS:**Listing of Claims:**

1 **Claim 1.** (currently amended) A golf club, comprising:
2 a head defined by a face and a top surface;
3 an alignment assembly comprising a dome attached to said top surface, said dome
4 defining a non-hemispherical top member having a non-hemispherical top surface and an
5 underside surface.

1 **Claim 2.** (currently amended) The club of Claim 1, wherein said dome is further
2 defined by a top surface, said top surface having a linear slot formed therein, said slot
3 penetrating said top member to interconnect said dome top surface and said dome
4 underside surface; and
5 whereby said head top surface is viewable through said slot formed in said
6 dome.

1 **Claim 3.** (original) The club of Claim 2, wherein said slot is aligned along a line that is
2 generally perpendicular to said face.

1 **Claim 4.** (currently amended) The club of Claim 3, wherein said dome is further
2 defined by a void formed within said dome, said void bounded at its top by said top
3 surface and at its bottom by a projection surface, said projection surface being said head
4 top surface.

1 **Claim 5.** (currently amended) The club of Claim 3, wherein said projection surface
2 and said slot are cooperatively arranged whereby incident light upon said slot creates a
3 projected image of a line on said projection surface.

1 **Claim 6.** (original) The club of Claim 5, wherein said projection surface, slot and said
2 projected image are oriented whereby said projected image is aligned with said slot along
3 a parallactic alignment sight line.

1 **Claim 7.** (original) The club of Claim 1, wherein said dome is further defined by a top
2 surface, said top surface having at least a pair of apertures formed therethrough.

1 **Claim 8.** (original) The club of Claim 7, wherein said apertures are aligned along a line
2 that is generally perpendicular to said face.

1 **Claim 9.** (currently amended) The club of Claim 1, wherein said dome is defined by a
2 top surface, said dome top surface is being said club head top surface.

1 **Claim 10.** (currently amended) The club of Claim 9, wherein said top member surface is
2 defined by at least a pair of apertures formed therethrough, said apertures aligned in a line
3 that is generally perpendicular to said face.

1 **Claim 11.** (currently amended) The club of Claim 9, wherein said top surface is defined
2 by a thin, straight, linear slot formed therethrough, said slot defining a line that is
3 generally perpendicular to said face.

1 **Claim 12.** (currently amended) An alignment assembly for attachment to a top surface
2 of a golf club head, comprising:

3 a dome defined by a top surface and a projection surface, said dome further
4 defined by a slot formed in said top surface, said dome defining a non-hemispherical top
5 member having a non-hemispherical top surface and an underside surface, said underside
6 surface in spaced arrangement above said head top surface.

1 **Claim 13.** (original) The assembly of Claim 12, wherein said top surface further
2 comprises at least one darkened portion of said surface adjacent to said slot.

1 **Claim 14.** (original) The assembly of Claim 13, wherein said projection surface further
2 comprises a lightened portion.

1 **Claim 15.** (currently amended) A golf club having a head defining a face and a top
2 surface, the head comprising:

3 parallactic alignment means for defining a parallactic alignment sight line said
4 parallactic alignment means comprising at least one aperture formed in an upper member,

5 said upper member being coplanar with said top surface and a projection surface
6 displayed on said head, below said at least one aperture and along said parallactic
7 alignment sight line, whereby light incident upon said at least one aperture will be
8 displayed on said projection surface; and

9 planar alignment means for defining a planar alignment sight line.

1 **Claim 16.** (currently amended) The club of Claim 15, wherein said planar alignment
2 means comprises a linear slot associated with said club oriented perpendicular to said
3 face, and said upper member is non-hemispherical.

1 **Claim 17.** (currently amended) The club of Claim 16, wherein said parallactic alignment
2 means comprises a dome attached to said head top surface, said slot formed in said dome,
3 and said projection surface is non-cylindrical.

1 **Claim 18.** (currently amended) The club of Claim 175, wherein said parallactic
2 alignment means comprises a projection surface associated with said head top surface
3 opposite to said slot, said projection surface is non-cylindrical.

1 **Claim 19.** (currently amended) The club of Claim 18, wherein said dome comprises a
2 clear dome having a pair of darkened portions adjacent to said slot, and a non-
3 hemispherical upper member.

1 **Claim 20.** (original) The club of Claim 19, wherein said projection surface further
2 comprises a lightened portion generally opposite to said slot.
